

What if your partner

POWERED YOUR PROFITS

Powering your profits

We'll power your business forward - towards tomorrow.

Our software defined network

We put technology at the heart of our network to speed up service deployment times and reduce the potential for human error. This software definition lets us implement network infrastructure

without incurring the hefty overheads of legacy carriers, so our partners can be commercially competitive. Our solution also gives network traffic multiple routes to eliminate single points of failure.

With our software defined network partners can:

Drive down costs by speeding up deployments and reducing manual work

Make configuration changes on the fly to reduce service lead times—from days to minutes

Increase and decrease bandwidth on demand

openreach
Connecting you to your network

We deliver our services on average

10

working days faster
than the market

Our work with Openreach.

We're the fastest growing Openreach Ethernet Partner

All solutions using the Virtual network are powered by our strategic partnership with Openreach to deliver the last mile. We're their fastest growing Ethernet partner with key relationships made at all levels of senior management and active participation in crucial industry forums and the EMP steering committee.

Virtual1 have fully integrated with Openreach for Ethernet ordering, removing any briefcase time. The benefits of the relationships and automation are clear in Virtual1's performance statistics vs the wider Openreach base—**we deliver our services on average 10 working days faster than the market.**

Find the solution that suits you

There are four main ways a reseller can benefit from the Virtual1 network:

1 Leverage our reach

Benefit from the reach of the Virtual1 network, combined with the aggregation of 9 other leading UK networks to get market-leading connectivity with a commercially compelling price point.

2 Streamline your suppliers

Our aggregation is achieved via a single order journey in 1Portal, with one dedicated service manager to give you better control of your solutions and reduce supply chain overheads.

3 Migrate, novate and transform your connectivity estate

Our base optimisation process helps our partners simplify their supply chains and reduce costs by:

Transferring billing and service relationships from a mutual network supplier to Virtual1

Transitioning an estate to us, with new solutions installed by Virtual1 to replace any existing

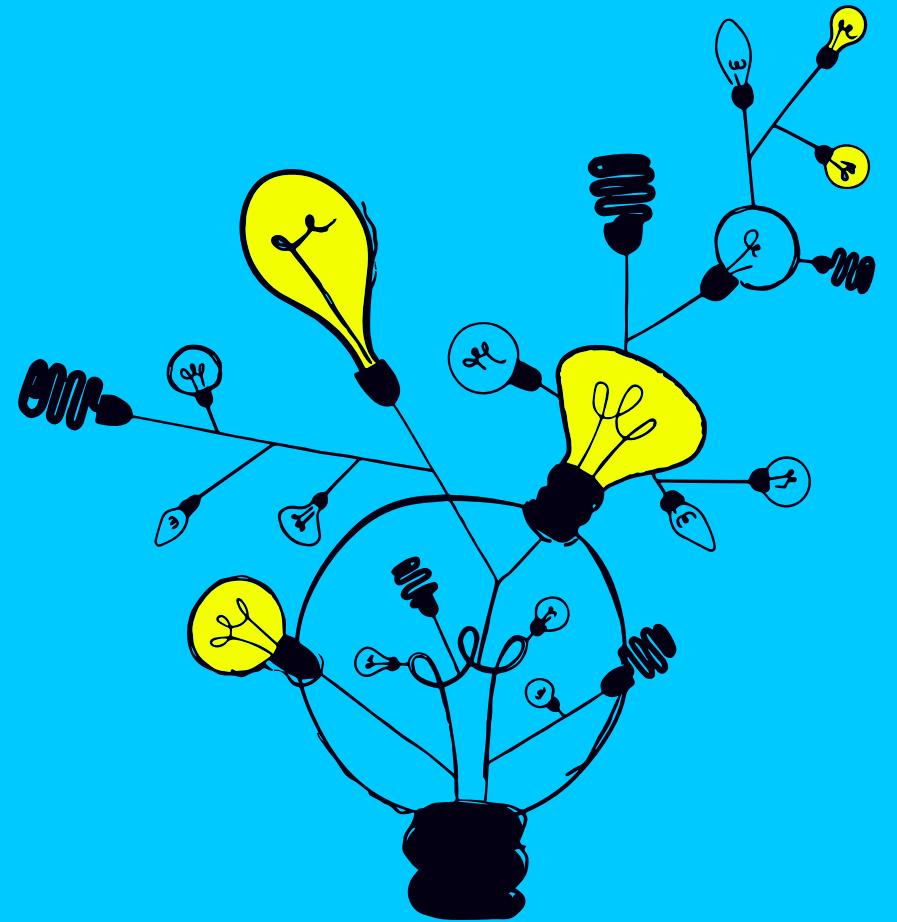

Transforming legacy products to Virtual1 solutions as they come out of existing contracts

4 Power your solutions with our infrastructure

With a drive among carriers to divest network infrastructure, we can absorb your network footprints while you consume the benefits of software-defined infrastructure with an expanded on net coverage—letting you abandon the challenges of capacity management, planned works and maintenance.

NOT FEELING THE CONNECTION?

You will with us

Connectivity

Uncover our connectivity solutions

Our connectivity products provide the standard of service you and your customers need today – in a way that is scalable for tomorrow.

We deliver a high-capacity network that's privately connected to market-leading technology solutions. Plus, we put intelligence and performance at the heart of our network to give partners complete control of our Layer 2 and Layer 3 solutions.

Layer 2 solutions

Our Layer 2 Ethernet technology makes it easy for businesses to run complicated Wide Area Networks using the same access technology applied on a LAN. So you can benefit from huge cost reductions and leverage in-house skills to implement any changes in real-time.

Layer 3 Solutions

Virtual1 can provide a range of managed and unmanaged Layer 3 solutions:

Internet access with Layer 2 VLAN (Carrier Connect)

Our hybrid internet access and Layer 2 offering allows local internet breakout for our partners' customers, while delivering a Layer 2 VLAN back to their core network for private access to on net solutions.

Wires-only access (SD-WAN Connect)

This Layer 3 service has fixed IP addressing in the core of our network, designed for a partner to deploy an SD-WAN controller on a customer site without additional routing CPE.

Managed Direct Internet Access (DIA)

Our DIA solutions have managed CPE included, are based on Ethernet, FTTP, EoFTTC, Cellular Ethernet, Broadband, FTTC or ADSL technologies and can connect to leading Cloud UC and SIP UK providers for complete end-to-end solutions.

Managed SD-WAN

We deliver a secure, multi-tenant, multisite SD-WAN alternative for MPLS-type deployments leveraging Fortinet's SD-WAN suite of products—a top 3 global SD-WAN vendor by revenue. Our SD-WAN solution supports Virtual1 CPE like those deployed in endpoints in clouds like AWS or Azure.

HEAD IN THE CLOUDS?

We'll get along nicely

Cloud

A seamless network and cloud experience

Virtual cloud solutions are built into the heart of our network to guarantee our partner's privacy and security for their business. We deliver flexible, resilient and high-performing solutions to suit their journey away from on-premise equipment.

There's no one size fits all for these environments, so we act as an enabler of cloud connectivity and never dictate or limit our partner's options.

With our cloud solutions your customers can:

Pave a way to digital transformation at their own pace, knowing we have the stepping stones in place

Retain critical applications in private Data Centres (Colo) while taking advantage of SaaS applications and cloud infrastructure

Access multiple public and private cloud solutions

Move at your own pace with our cloud solutions

Colocation – the first step towards the cloud

Colocation gives you all the benefits of a Tier 3 Data Centre, while sweating your existing hardware investments. We deliver Colocation across 3 leading locations, each privately connected to our network.

Cloud – our Infrastructure as a Service platform

A flexible, cost-effective and resilient alternative to the hyperscalers. Using best-of-breed, enterprise-grade hardware and hosted in the heart of our network, it's simple to deploy, monitor and manage.

Cloud Exchange – bringing it all together

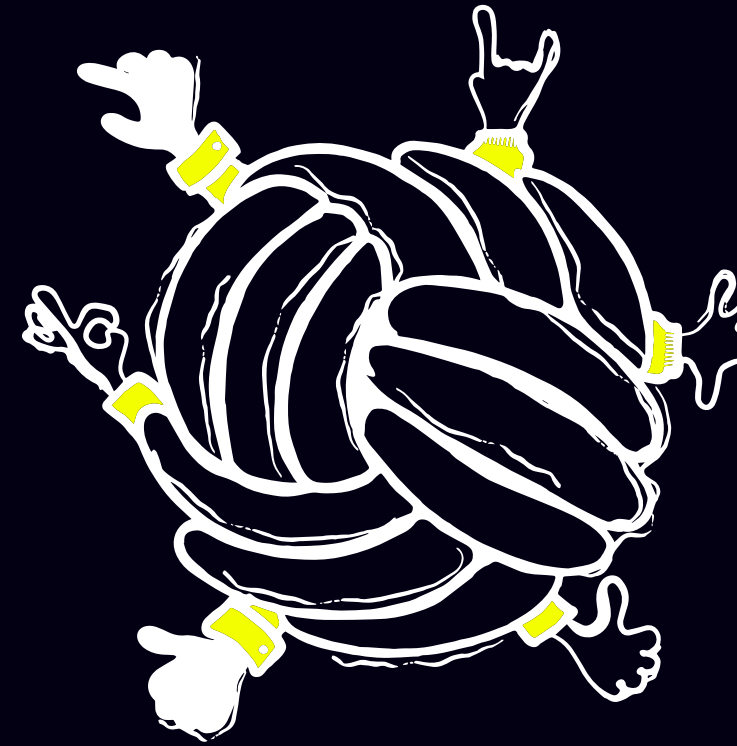

Critical business applications are located in many different locations. Cloud Exchange privately connects the leading Public Cloud and SaaS providers to deliver a high-performing and secure experience.

Acronis Cyber Cloud – for all your data security needs

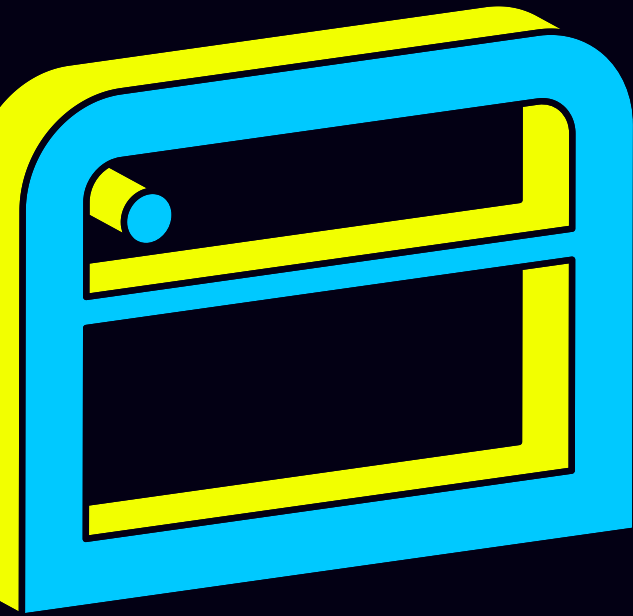

We partner with Acronis, global leaders in data security, to offer a complete suite of data protection products. Including: data backup, DRaaS, AI-based malware protection, remote desktop management and security.

What if excellent
customer service

**WAS
EASY?**

¹Portal

Why the best service is self-service

We put our partners at the heart of everything we do to provide them with complete ease of service at all touchpoints.

Our award-winning customer service portal and its associated API's allow our partners to quote, order and manage all their solutions in real time, providing a seamless, automated experience that drives down costs and improves the customer experience.

With ¹Portal you can:

Quote Layer 2, Internet Access, MPLS & Managed SD-WAN solutions

Benefit from online ordering and automated paperwork

Get full view of Openreach's infrastructure mapping and available capacity

Gain real-time prices of Virtual1 and other major UK carriers, in under 30 seconds

Have access to our partner enablement toolkits and knowledge library to empower your sales and support teams

Get direct management and configuration of live circuits and solutions on our Software Defined Network, such as bandwidth flex and VLAN configuration

Track all your projects, with real time integration and progress updates from Openreach

Complete transparency throughout the lifecycle

We get that customers want transparency around their solutions and how they're performing at all times.

¹Portal gives unparalleled visibility of the connectivity and cloud options available at a location, as well as the solutions they take from us and the services provided across the connectivity—reducing time and effort in generating quotes and providing support on existing solutions.

The benefits to carriers

Have complete visibility of all carriers and solutions available at each quote location

Get clear project plans with clear lead times, milestones, and SLA's

Raise, track and interact with support cases in real-time

Receive detailed live network analytics, which can also be provided to end customers

Access your entire service inventory and drill down to individual customers

Gain true visibility of our network

¹Portal also provides access to our essential network monitoring tool which gives detailed information about our partners' networks for them to see what's happening to their solutions, 24/7. You can diagnose faults, see what services are consuming the most bandwidth and make any adjustments on-the-fly to get your business back up to speed, fast.

¹Portal's health check functionality also lets partners run many of the diagnostic checks our first line support team perform on a live circuit to give faster resolution of simple faults, and faster escalation of complex ones. The health check measures your service against known good criteria and its output can be converted into a support case in just one click.

Make our services, yours.

Our white label functionality lets you spruce up both 'Portal and our network monitoring tool with your own branding to:

Quote the entire portfolio with single and multisite solutions

Deliver a native feel for your internal users

Build in margin uplift for your users to go straight to market with the numbers they see, and upfront and recurring margin uplifts applied

Transform your customer experience with our suite of APIs

Stop time-wasting across your supply chains by integrating your products directly with Virtual1. Our suite of APIs let you enhance your speed of service delivery through automation for a better customer service experience.

We've integrated with other major suppliers, so you don't have to. Sync up your systems with ours for quoting, ordering, management and support. Plus, with our fully documented test environment, we provide all the tools you need to thoroughly test and configure your solutions.

The power of APIs

- Layer 2 and Layer 3 quoting and ordering
- Inventory and ticket Management
- SDN features including: Bandwidth Upgrade, QoS, VLAN modification

Virtual1's 200+ staff are based across our London HQ, North Macedonia, China and Sweden. Our teams know that being easy to deal with is just as important as the solutions we deliver, so we have the best people in the industry with a passion for what they do.

In addition to our solutions, we offer our partners peace of mind that they're dealing with a professional, robust organisation.

How we do it:

We're ISO27001 (information and security) & ISO22301 (business continuity) accredited to demonstrate a fully robust and dependable supplier with detailed processes to mitigate risk when things go wrong.

We set the bar high with an NPS target of 60, and we achieve it. In a highly competitive marketplace, the customer experience is just as important as the service you deliver so we've made it one of our core objectives.

We're serial award winners, achieving 17 in the last 2 years alone. This includes Best Network at the Comms National Awards 3 years running, winning in Cloud Transformation at the Acronis #CyberFitPartner Awards 2020 and Specialist Vendor of the Year at CRN Channel Awards. This recognition gives end customers confidence that their supplier is working with a market leader and innovator.
